Raj Chandra

DevOps and Backend development are two of my strongest areas of expertise. Through my years of experience as Full Stack developer, I have perfected my skills as a developer and leading a team but I want to learn and expose myself to the industry standards. It is the combination of these skills and a hunger to learn more that make me a suitable candidate for any work in this domain.

EXPERIENCE

CodePark, Vellore— *Founder*

September 2017 - PRESENT

Woking on building technology that can help budding programmers have more access to programming solutions and fun while they learn. **View CodePark**.

Geminid System Inc., Remote— *Software Developer Intern*

May 2018 - June 2018

Automated the work done on Salesforce which saved hundreds of minutes at the company.

PROJECTS

- Making coding easier for programmers by making a code sharing platform which is enabling beginners to clear doubts with ease and professionals to spread their knowledge. **CodePark** is my venture to make coding more easy and fun.
- Made the most played online game in the campus, with over 1000 users playing the game. **Enigma 3 and Enigma 4** were MEAN stack app with a machine learning bot to provide better UX. I worked as a backend and Angular developer in the project.
- Cut down more than a day in the recruitment process for our chapter by making the "**recruitment portal**" that helped candidates and recruiters to go through the process with ease.
- Connected the people of tandwa to the internet by making a web app for them "**Tandwa.com**" is now a well known website to bring tandwa to internet and helps them share their idea and vision for the upcoming tandwa.
- Made a **CGPA calculator for VIT** students, page views over 100,000.
